UL's Product Carbon Footprint Measured approach is a critical review of the product carbon footprint to ISO 14067. Greenhouse Gases – Carbon Footprint of Products – Requirements and Guidelines For Quantification. The review meets the criteria of ISO 14071.

The carbon measured program focuses on methodology and is done through a desk assessment of the LCA and footprint report. The verification confirms that the footprint meets the criteria and is not only in compliance with ISO 14067 but also ISO 14040 and ISO 14044 as well as any relevant Product Category Rule.

**REVIEW & VERIFICATION PROCESS**

The review involved the verification based on the requirements set forth by the applicable ISO standards, The International EPD System (2024) Product Category Rules (PCR): *PCR 2019:14 Construction products (EN 15804:A2)*, and UL's General Program Instructions (GPIs). The critical review of the Carbon Footprint of Products project reports identified and categorized all requirements specified by the PCR, GPIs, and applicable ISO standards.

This review did not include an assessment of the Life Cycle Inventory (LCI) of the Carbon Footprint of

Products model, however, it did include a detailed analysis of the individual datasets used to complete the study.
